HIGHLIGHTS

THE HOB is the most important equipment in our Asian kitchen. It is used not just to heat up water or making food cooked, but enables good dishes served on the table for the family and the loved ones.

HEAT EFFICIENCY is the key indicators to measure how good the hob can be. A modern gas-on-glass hob has already evolved from the previous generation of 30-40% to above 60% efficiency nowadays.

SAFETY is the best gift we can get for our family. Choosing a stainless-steel structured hob will make your kitchen a safer place without worry about glass shattered or crack.

The **NEW** **volcano** series wok burner

The new generation of Lebensstil Kollektion hobs come with the **Volcano wok burner and support** that provides heat efficiency up to 64%. The flame output can now reduce to save energy and gas consumption. Alongside with the fire-proof structured **Safety-net Glass**, the glass piece will remain stable in the event of being shattered or crack, without mentioning the glass piece can withstand extreme temperature up to 850°C.

The **LKGH-8602MB** features 2 large **VOLCANO WOK** burners with **5.5kw** of output each with cast iron support for Wok and Pan.

The built-in flame failure safety device ensures that the gas supply will be automatically cut off in the event the flame goes off, thus eliminating the chance of gas leakage through the burner.

Installation is also a breeze, as the new line up comes with a **“Flexi-Fit”** feature, that can easily fit into your new kitchen or superseding your existing one without modification on the cut-out hole.

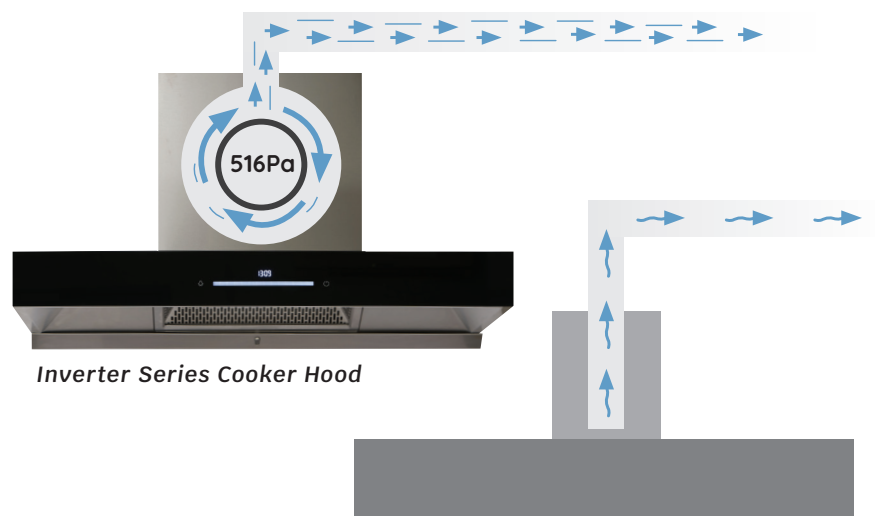

LKGH 8603

Still be wildered by the air flow numbers when trying to choose the right cooker hood?

Air ventilation in the kitchen isn't just about the air flow, it's a combination of air volume and speed while not compromising comfort, running cost and complication in maintenance.

The new **INVERTER SERIES** from **Lebensstil Kollektion** introduces the 1st of its kind by using a fully sealed Inverter motor that impose exceptional air pressure to generate up to **516Pa** at maximum speed. That translates to a very high air movement speed that will exhaust the fumes and smoke out of your kitchen much faster than comparable cooker hood with the same air flow in m³/hr.

Thanks to the nature of its built, the new inverter motor consumes **63% less energy**, **14% more air flow** and generates **91% more air pressure** compared to a conventional motor. With all these high-performance figures the inverter motor only generates **56dB** of audible sound, channelling the fumes and air to the outside without interrupting your conversation with your guests and loved ones.

Inverter Series Cooker Hood

Conventional Hood

High airflow alone does not make a good cooker hood. It is the combination of strong air pressure and flow that will speed up the extraction of fumes from your kitchen so it can be vented out at high speed.

PROFESSIONAL SERIES

Who says home cooking can only use home appliances?!

Take your kitchen to the next level with the LEBENSSTIL KOLLEKTION PROFESSIONAL SERIES. The hob is built with commercial standard toughness with the flame output set to a semi-professional level for domestic use. In order to cope with the superb cooking activities, the Professional Hood is the one thing you must pair with!

Model **LKPH-9601BIR**

Extraction (Max): 1,850 m3/h
